

KWizCom Mobile

Improving efficiency of the mobile workforce

Everyone's Going Mobile

All companies want their employees to be able to work while they are on the go: at the airport, between meetings, etc.

There are Many Different Devices

BYOD is here. Smartphones, tablets, fablets: you need to support them all, enabling business users to keep collaborating and performing their SharePoint tasks same as they do with their desktop environment.

Mobile Users' Needs are Different!

When you're out of the office or when using a touch device, your working environment is a lot more limited:

- Screen size is limited, keyboard is less convenient
- You are on the move
- You have much less time
- Every page-refresh takes more time
- You require particular type of information or need to perform very specific actions related to your current activity

So while you're on the go, the last thing you need is all the information available in your SharePoint portal squeezed into your smartphone's screen!

Focus **KWizCom Mobile**

Smart, focused interface for productive mobile users

Context-Sensitive

- Different Menus
- Different Fields
- Different Permissions

Task-Oriented

- Less is Better!
- The exact Actions that I Need!

KWizCom Mobile allows **non-technical** users to create **custom-tailored & focused** mobile solutions that answer your mobile users' exact requirements!

Non-technical? With zero development you can create a custom-tailored mobile interface with the exact menus, buttons, fields and flow that answers your business requirements!

Custom-tailored? Yeah, no more just the generic SharePoint menus, different users can have customized mobile solutions that fit their needs, enabling them to work much faster!

Focused? Yes! Users benefit from a task-oriented interface that shows them exactly what they need! Less menus and options, simple and clear! Less clicks, less page refreshes, less page scroll and less typos!

But What About Deployment?

Server solution

KWizCom Mobile is a server solution, deployed as a farm or S.C. feature.

What does this mean?

Nothing gets installed on users' devices

+

Easy to maintain and upgrade

Low cost of ownership!
