

## Version History

| CR#                                | Description   |
|------------------------------------|---|
| <b>Version 1.1.45, Nov-26-2018</b> |   |
| 5864                               | Fixed: Using the [fieldname] token to populate a default value in date field does not populate the correct date   |
| 5885                               | Fixed: Having an email activity with 2+ person fields as the recipient does not work  |
| <b>Version 1.1.42, Nov-06-2018</b> |   |
| 5863                               | Fixed: Default Values [Today] token does not observe regional settings  |
| <b>Version 1.1.41, Oct-05-2018</b> |   |
| 5853                               | Fixed: Yes/No fields do not dynamically hide/show fields  |
| <b>Version 1.1.40, Sep-24-2018</b> |   |
| 5792                               | Fixed: calculated fields cant be used in a condition with custom actions  |
| <b>Version 1.1.38, Aug-29-2018</b> |   |
| 5801                               | Fixed: Lists with additional content types using KWizCom Forms will spawn a navigation confirmation when an item is saved while editing   |
| 5810                               | Improved: KWizCom Forms activities requires that a user has admin permission to the site collection. Now, if the user doesn't have access to the site collection the list of webs is filtered to only show webs and sub webs starting from the current web. |
| 5815                               | Added: add + and - collapse/expand icons to accordion groups  |
| <b>Version 1.1.36, Jul-24-2018</b> |   |
| 5500A                              | Fixed: Resolve collision with Microsoft's one page navigation.  |
| <b>Version 1.1.35, Jul-19-2018</b> |   |
| 5742                               | Fixed: Hidden mandatory fields will still trigger their constraint  |
| 5746                               | Fixed: custom actions with user group based conditions do not trigger correctly   |
| 5756                               | Fixed: Blank fields will prevent custom action emails from being sent out   |
| 5757                               | Fixed: choice fields/attachment fields will prevent custom action emails from being sent out  |
| 5758                               | Fixed: enhanced rich text fields will display markup when contents are sent out in an email via custom actions  |
| 5759                               | Improved: Field permissions and field grouping does not detect calculated fields  |

| CR#                                | Description   |
|------------------------------------|---|
| 5762                               | Added: Display a warning if a user navigates away from a form without saving changes                        |
| 5763                               | Added: Add "Apply" button to the Edit Item form to enable saving without leaving the form.                  |
| 5771                               | Fixed: property doesn't load in activity settings page for multi-choice lookup                              |
| 5772                               | Fixed: Forms app causes performance issue with date picker field  |
| 5773                               | Fixed: scroll bar is shown in pop out Forms window when Cascading Lookup field is within a fields group tab |
| <b>Version 1.1.30, Jun-06-2018</b> |   |
| 5628                               | Improved: don't allow users who don't have admin permissions to view the forms app settings page.           |
| 5671                               | Fixed: Hidden mandatory person fields will prevent attachments from being attached                          |
| 5673                               | Fixed: Custom actions "editable fields " still shows all fields regardless of selection                     |
| 5686                               | Fixed: "Created/Modified By" fields do not show up when mapping a custom variable in custom actions         |
| 5720                               | Fixed: Creating a copy item activity does not save  |
| 5685                               | Fixed: person/group fields cannot be used in the email recipient field                                      |
| <b>Version 1.1.28, May-09-2018</b> |   |
| 5641                               | Added: Allow accordion groups to be opened at the same time.  |
| 5668                               | Added: Users who do not have permissions to see any field groups will see an empty form + message.          |
| 5670                               | Fixed: Custom actions which are deleted will still appear in the ribbon but disabled.                       |
| 5682                               | Improved: make sure forms app redirects to classic forms.   |
| 5683                               | Added: Enable configuring field caption aliases in Field Groups/Tabs page.                                  |
| <b>Version 1.1.26, Apr-25-2018</b> |   |
| 5642                               | Improved: Hide custom action buttons in the ribbon when conditions are not met                              |
| 5683                               | Added: Enable configuring field caption alias in Field Groups/Tabs page                                     |
| <b>Version 1.1.25, Mar-21-2018</b> |   |
| 5517                               | Improved: Enable validating the Attachments field and including it in conditions                            |
| 5619                               | Improved: Allow attaching multiple files in one-shot  |
| 5500A                              | Improved: Field Groups settings page improvements   |
| <b>Version 1.1.18, Feb-22-2018</b> |   |

| CR#                                | Description  |
|------------------------------------|--|
| 5376                               | Improved: Field Groups/Tabs: When changing column colspan in a group for some reason it removes all empty rows |
| 5377                               | Fixed: highlighted column due to validation error stays highlighted even after I corrected the error.          |
| 5491                               | Improved: add ? link to forms app user guide   |
| 5512                               | Fixed: repeating rows field will show loading when printed using the SLFE built in print feature               |
| 5527                               | Added: Enable adding the 1st row in the field groups designer  |
| 5581                               | Added: Remove the "Print" button from the View item form   |
| 5493                               | Fixed: Quick navigation links do not work  |
| 5497                               | Fixed: The new filters added to the cascading LookApp stretch the entire form                                  |
| 5575                               | Fixed: tokens that pull from a person/group field break emails sent via custom actions/activities on o365      |
| <b>Version 1.1.14, Feb-09-2018</b> |  |
| 5568                               | Fixed: field tokens do not work in field constraints within forms app  |
| 4944                               | Added: Stop validating hidden fields   |
| 5550                               | Added: Build forms api   |
| 5571                               | Added: Support multi-line default value for multi-line text field  |
| <b>Version 1.1.10, Dec-21-2017</b> |  |
| 5510                               | Fixed: Regional date settings are not enforced when using date field with field constraints.                   |
| <b>Version 1.1.09, Sep-24-2017</b> |  |
| 5481                               | Fixed: Cascading LookApp does not trigger dynamic field permissions in KWizCom Forms App                       |
| <b>Version 1.1.08, Sep-15-2017</b> |  |
| 5168                               | Fixed: Repeating rows field cannot be disabled based on another field  |
| 5419                               | Improved: Change error message if current logged in user does not have ability to use custom scripting         |
| 5424                               | Fixed: Hiding a view will disable the export to excel button for all views regardless of permissions           |
| <b>Version 1.1.07, Aug-02-2017</b> |  |
| 5000A                              | Fixed: Fix automated sanity checks.  |
| <b>Version 1.1.06, Jul-25-2017</b> |  |
| 5202                               | Added: Add a "move" activity   |

| CR#                                | Description  |
|------------------------------------|--|
| 5342                               | Added: "Add Item" activity: return the added item's ID   |
| 5371                               | Added: Disable ribbon buttons for lists that are using a view restricted by the kwizcom forms app.       |
| 5372                               | Added: Enable validating choice field by comparing its value to another field                            |
| 5373                               | Fixed: Can't delete regular expressions.   |
| 5375                               | Added: Enable configuring field description location.  |
| 5389                               | Added: Enable using output parameters in the "Redirect on complete" field.                               |
| <b>Version 1.0.98, Jun-20-2017</b> |  |
| 5341                               | Improved: Activities: Enable loading column value also to a choice field                                 |
| 5354                               | Fixed: Duplicate and irrelevant fields appear in Field Groups/Tabs settings page                         |
| <b>Version 1.0.95, Jun-13-2017</b> |  |
| 5330                               | Added: Add "Print" button to View Item forms   |
| 5350                               | Fixed: default values not correctly applied to user/group conditions                                     |
| <b>Version 1.0.91, Jan-25-2017</b> |  |
| 4691                               | Added: Add Custom Actions to the Enterprise edition  |
| 5177                               | Added: Add support for math operations with dynamic fields   |
| <b>Version 1.0.77, Sep-24-2016</b> |  |
| 4687                               | Improved: Support Azure AD in Forms rules  |
| 4984                               | Fixed: Field permission conditions cannot involve a cascading lookapp that looks up to another site      |
| 5016                               | Fixed: Disable rules for person group and multi line fields don't work on firefox or chrome              |
| 5031                               | Fixed: Hiding fields but excluding multiple users does not work.   |
| 5046                               | Fixed: disabling a multiline text field does not work with Edge and chrome                               |
| 5053                               | Fixed: KW Forms app - Field permissions breaks field grouping  |
| <b>Version 1.0.61, May-03-2016</b> |  |
| 4956                               | Fixed: form data is visible before forms settings applied.   |
| <b>Version 1.0.60, Apr-26-2016</b> |  |
| 4946                               | Fixed: forms settings not applied when page is refreshed, happens after MSOnline API update on April-24. |

| CR#                                | Description  |
|------------------------------------|--|
| <b>Version 1.0.58, Apr-05-2016</b> |  |
| 4895                               | Improved: Make tabs height dynamic instead of fixed.   |
| 5200A                              | Improved: Support SharePoint 2013/2016 on-premises   |
| <b>Version 1.0.56, Mar-16-2016</b> |  |
| 4890                               | Fixed: Hiding a Cascading LookApp column that is involved with another hide rule does not always work. |
| <b>Version 1.0.55, Mar-02-2016</b> |  |
| 4692                               | Added: Add Cascading Lookapp settings pages to KWizCom Forms app Pro edition                           |
| 4735                               | Improved: Add support for managed metadata   |
| 4813                               | Improved: Add support for Picture and Managed metadata default values                                  |
| 4865                               | Fixed: Trial message displayed in export/import settings   |
| 4877                               | Fixed: Field grouping disappears if a disable rule is added  |
| <b>Version 1.0.52, Feb-18-2016</b> |  |
| 4815                               | Fixed: Managed metadata fields don't show when field grouping is used                                  |
| 4840                               | Improved: Change View Permissions logic: group rules by view   |
| 4854                               | Fixed: Cannot hide a column from list view if a condition is set involving the current user            |
| 4800A                              | Improved: Improve field alignment and make field captions bold (easier to view)                        |
| <b>Version 1.0.49, Jan-26-2016</b> |  |
| 4768                               | Added: Enable checking the value of a field before it was changed in conditions.                       |
| 4784                               | Fixed: Multi-line rich text fields cause groups to not display.  |
| <b>Version 1.0.42, Dec-03-2015</b> |  |
| 4767                               | Fixed: Issues with non-responsive forms.   |
| <b>Version 1.0.40, Nov-03-2015</b> |  |
| 4651                               | Added: Quick Item Navigation - add to Professional edition   |
| 4665                               | Fixed: Issue with hiding fields  |
| 4710                               | Fixed: Hiding fields based on choice columns does not show some fields                                 |
| <b>Version 1.0.30, Sep-21-2015</b> |  |
| 4535                               | Added: Column Permissions: Apply column permissions in views including Quick Edit view.                |

| CR#  | Description  |
|--|--|
| 4592   | Fixed: Form width does not resize dialogue window (when using SP2010-style popups)   |
| 4593   | Improved: Enable deletion of a column directly from the rules list (no need to edit it in order to delete a rule)              |
| 4594   | Improved: Display calculated fields in kwizcom forms tabs in view mode.  |
| 4608   | Fixed: Field grouping does not render fields when switching tabs in view form.   |
| 4613   | Fixed: Date fields cause form to jump back to top in Chrome.   |
| 4633   | Improved: Add greater than/less than operator to Choice column.  |
| 4634   | Improved: Flush user-group connections cache when saving KWizCom Forms settings pages.   |
| <b>Version 1.0.24, Aug-04-2015</b>               |  |
| 4570   | Improved: Field constraints configuration UX improvement: automatically populate the error message field in the settings page. |
| 4582   | Fixed: Comparing a people/group field to the [me] token does not work.   |
| <b>Version 1.0.23, Jul-23-2015</b>               |  |
| 4581   | Fixed: Disabling a date/time or people/group field using Kwizcom Forms APP doesn't work in Chrome.                             |
| <b>Version 1.0.16, Jul-02-2015</b>               |  |
| 4529   | Fixed: Field Constraints: Validation summary displays field names rather than visible field label.                             |
| 4557   | Fixed: Support WCAG level AA for end-user UI   |
| <b>Version 1.0.0, May-01-2015 - Base version</b> |  |
